

Three options to replace *the circuit F*.

A The turn

B The cut

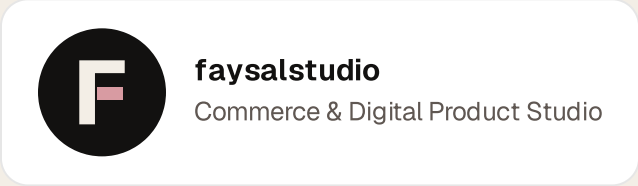

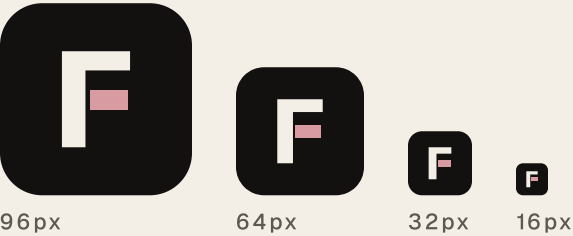

C F over S

— OPTION A

The turn.

Geist F, same weight as the wordmark. The middle arm is cut free and set in the turn colour: the brand's two-tone idea inside one letter.

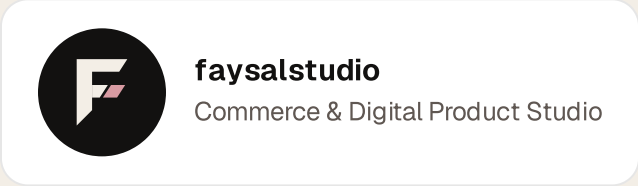

- + Built from the wordmark's own font, so the system speaks with one voice
- + Clean enough to read at 16px as a favicon
- + Says "the second line" without explaining it
- The quietest of the three; it relies on colour to be distinctive

The cut.

Keeps the slanted terminals of your current F, drops the circuit. The middle arm’s tail is sliced off on the diagonal and set in the turn colour.

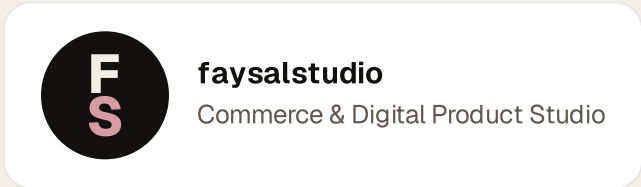

- + Continuity with the mark you already use
- + More movement and character; feels crafted, “made to measure”
- The small cut piece blurs below 32px
- Angled cuts are a common “tech” gesture, less ownable

— OPTION C

F over S.

The stacked wordmark in miniature: F in the first tone, S in the turn colour.

- + The most direct link to FAY / SAL
- + Instantly recognisable next to the wordmark
- Two letters stacked get tiny in a circle crop and at 16px
- Reads as “FS” initials, a common monogram pattern

Same idea, *rebuilt in Geist*.

Today. A different heavy grotesk, and a burgundy (#57262B) that almost disappears on black (1.5:1).

Refined. Geist 800, the site's font. One burgundy (#64292F) on light grounds. On ink and burgundy, SAL turns rose, the same rule the posters follow, so it reads at profile-picture size. The ivory version becomes the primary.

Wordmark for the name. *A for the signature.*

Option A is the most honest translation of the brand: one font, one idea (the turn), and it survives every size the small mark has to work at.

B keeps more of your current F if continuity matters to you. C is the safest link to the wordmark but the weakest at 16px.
